(54) Title: SYSTEM AND METHOD FOR THE AUTOMATIC SETUP OF SWITCHED CIRCUITS BASED ON TRAFFIC PREDICTION IN A TELECOMMUNICATIONS NETWORK

(57) Abstract: An optical network is configured so as to dedicate a first portion of lightpaths to high priority traffic, and leaving a second portion of lightpaths available for low priority traffic. The high priority traffic entering the high priority lightpaths is monitored. In case of detection of a burst in high priority traffic, at least one of the low priority lightpaths is torn down, so as to make available network resources within the network. Then, a new temporary lightpath is set up using the available network resources, and high priority traffic is routed on the temporary lightpath.
